CTM.10 OVERLAP 01-06.02.2010

XOR

Modulator

4011 Quad NAND

NAND

A	B	A⊙B
0	0	1
0	1	1
1	0	1
1	1	0

4011

+V inverts the Input
GND look Table

4077 Quad XNOR

XNOR

A	B	A⊕B
0	0	1
0	1	0
1	0	0
1	1	1

4077

GND inverts
+V does not invert

4070 Quad XOR

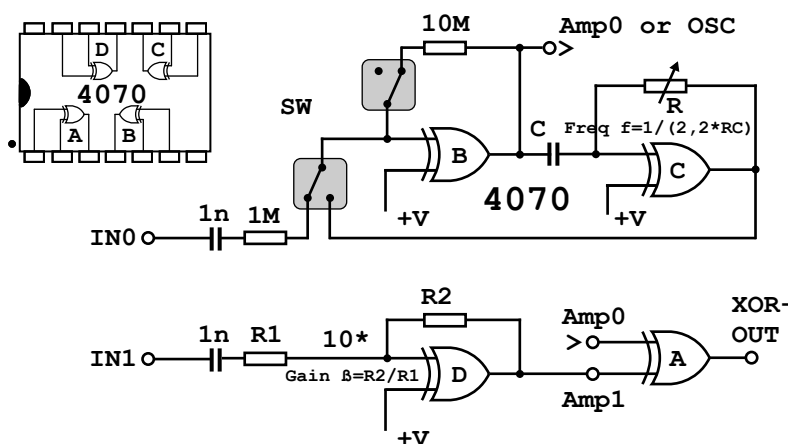

XOR

A	B	A⊕B
0	0	0
0	1	1
1	0	1
1	1	0

4070

+V inverts the Input
GND does not invert

Switch States: 2 x XOR-Oscillator
1 x XOR-Amp / 1 x XOR off

->Features: 1 Internal Oscillator
1 or 2 Inputs with "Amps"

FET-PreAmp SMD 2010

Some schematic,
just a different Style:

- 1 x 10..22k lin Pot
- 1 x 100k lin Pot
- 1 x 2k = 2 x 1k
- 1 x 33k
- 1 x 1M
- 1 x 4u7 Elco
- 1 x 22uF Elco
- 1 x MPF 102 FET
- 1 x 5V1 Zener diode
- 1 x PCB single sided

Transmitting Object Behaviors

Amplification of Photocurrent

TIL99 } As Phototransistor
As Photodiode

74HC14 etc SchmittTrigger

Under forward bias, conventional current will pass from the anode to the cathode, following the arrow in the symbol. Photocurrent flows in the opposite direction.

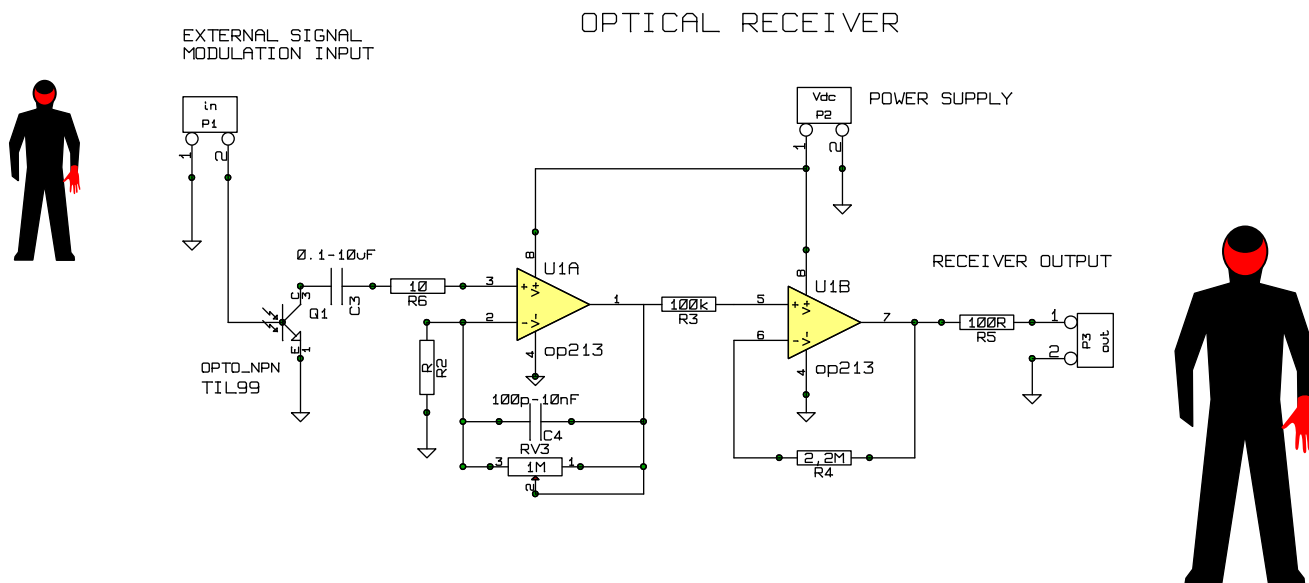

Since transistors and ICs are made of semiconductors, and contain P-N junctions, almost every active component is potentially a photodiode. Many components, especially those sensitive to small currents, will not work correctly if illuminated, due to the induced photocurrents. In most components this is **not desired**, so they are placed in an opaque housing. Since housings are not completely opaque to X-rays or other high energy radiation, these can still cause many ICs to **malfunction** due to induced photo-currents.

Improved Replacement
for TLC272, TLC277

Optical Receiver

PRELIMINARY GRAPH AFTER PIKSEL, Bergen
Jo frgmnt Grys / tob.de.vu / 2008
Transmitting Object Behaviors

Add the varicap

Add two 22p capacitors

Add two transistors

Add two 1M resistors

Add the 100n capacitor

Add the 100k resistor

Add two coils & mid connection

Add the 47n capacitor

Connect both channels, battery-
& 70cm of antenna-cable

TIPS: The coils are easily fabricated by winding the silverwire around a 10mm drill bit.. When finished & powered, tune a radio to a noisy space between stations, then tune the transmitter by slowly turning the screw of the varicap with a non-metallic screwdriver until the noise stops. Now you can snip against the coils & tune to a clear radio sound! Increase stability: Use stabilized power for long term frequency stability. Connect rear copper plane to ground. Extend range: With a tuned dipole antenna & strong input signal.
